TUTORIAL EVALUATION 2 ACTIVITY

MHN 205: Entrepreneurship and New Venture Creation
IGNITE Programme – In collaboration with the Wadhwani Foundation
Activity Title: Development and Demonstration of a Prototype
Total Marks: 10
Dates: 27th October 2026 to 30th October 2026

1. Objective of the Activity

The objective of this activity is to enable students to convert their proposed venture idea into a tangible or visual representation of a solution to a clearly identified customer problem. Students will demonstrate how their proposed solution works, explain its key features and collect feedback to identify areas for improvement.

2. Instructions for Students

I. **Form your team:** Work with your existing venture team. All team members must actively contribute to the activity.
II. **Identify the problem:** Clearly explain the specific problem or unmet need that your proposed venture intends to address and identify the target customers.
III. **Develop the prototype:** Prepare a basic prototype of your proposed product or service. The prototype should demonstrate the core idea and its intended functionality rather than a fully developed commercial product.
IV. **Choose a suitable format:** Depending on the nature of your venture, you may develop any one of the following:
    A. Physical model or mock-up
    B. Paper prototype or product sketch
    C. Digital prototype, app interface or website wireframe
    D. Storyboard illustrating the customer experience
    E. Role-play or service demonstration
    F. Working model, wherever feasible
V. **Demonstrate the solution:** Present your prototype and explain how it addresses the identified problem, how the target customer would use it, and what makes the solution useful or different from existing alternatives.
VI. **Explain the key features:** Identify the main features of the prototype and distinguish essential features from those that may be introduced in future versions.
VII. **Collect feedback:** Obtain feedback from potential users, classmates or other relevant stakeholders. Explain the suggestions received and the improvements you would make to your prototype.

VIII. **Present your work:** Demonstrate the prototype during the tutorial evaluation. Every team member must participate and be prepared to answer questions related to the venture idea, customer needs, prototype design and possible improvements.

3. Evaluation Criteria (10 Marks)

The tutorial evaluation will carry **10 marks**, comprising **5 marks for the team-based prototype** and **5 marks for individual presentation and understanding**.

- **Team-Based Prototype Evaluation (5 Marks – Common to the Venture Team):** The prototype will be evaluated based on its relevance to the proposed venture idea and identified problem, creativity and design, demonstration of key features, and practical feasibility and usefulness for the target customers. The marks awarded will be common to all team members.
- **Individual Evaluation (5 Marks – Based on Presentation):** Each student will be evaluated individually on presentation skills, conceptual understanding of the venture and prototype, individual contribution, clarity of explanation, and ability to answer questions and justify the proposed solution.

4. Important Guidelines

- The prototype must be aligned with the team's proposed venture idea.
- Students may use low-cost, readily available and recycled materials wherever appropriate.
- Expensive materials, professional finishing or a fully functional commercial product are not required. Evaluation will focus on the quality of thinking, relevance and demonstration of the proposed solution.
- For digital or service-based ventures, a wireframe, storyboard, simulation or role-play may be used instead of a physical product.
- Teams should be able to explain the assumptions they are testing through the prototype.
- The prototype should be original to the team, and any external resources or references used should be appropriately acknowledged.
- All team members should understand the prototype and contribute to the presentation and discussion.
- Students must bring their prototype and any supporting material required for the demonstration on the date specified by the course instructor.
